

Get Highly-Secure Wireless Connectivity

When you're innovating for a connected future, everything you connect to the internet must be highly-secure, private, fast and reliable. Smart buildings, wireless surveillance cameras, smart manufacturing systems and connected education campuses are all especially in need of secure, low-latency and software-free wireless solutions.

Keep your customers going with a wireless backup network.

Whether your customers need primary internet access, a failover solution or a secure wireless solution, T-Mobile has a way to keep devices securely connected to the network if/when fiber is unavailable.

Automatic Failover

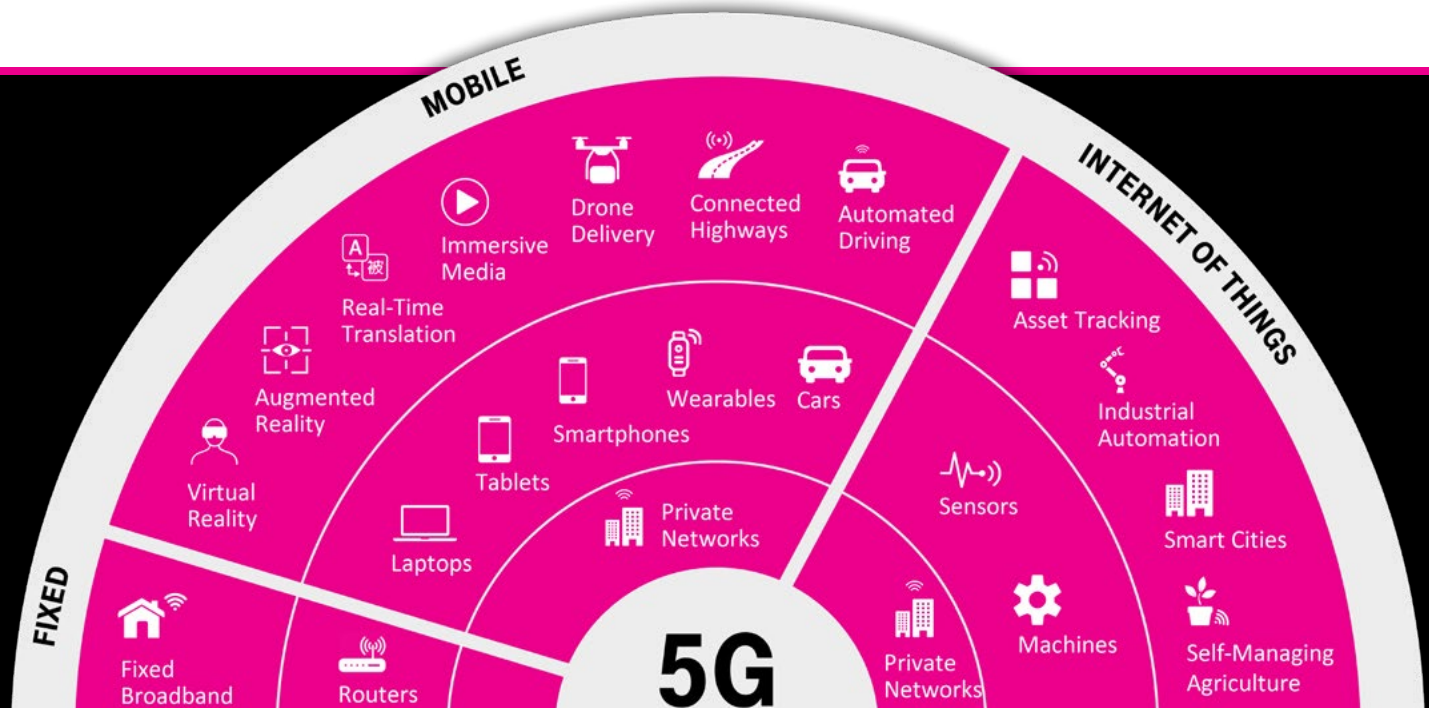

- Wireless coverage that blankets their HFC
- Failover SIM cards built into their routers
- Extra layer of redundancy and reliability

Edge Connectivity

- Faster deployment in brand new construction
- Low latency with our geographically distributed network
- Standalone solution or bundled with other services

Bundled with SASE

- Highly-secure solution without the added software
- Clientless security and management
- Highly-secure SIM cards with low latency

T-Mobile's Fixed Wireless Platform Capabilities.

Subscriber management.

Robust and customizable subscriber and account management tools that include the ability to create, manage and change basic plan types and feature details, monitor usage and set usage events and notifications.

Data usage controls and thresholds.

Create customized data buckets, usage limits and tiered data thresholds for more effective device and usage management.

Business insight tools.

Help increase profitability by using our standard and custom reports and dashboards to monitor and manage your business.

Subscriber support tools.

Quickly manage and troubleshoot device issues and errors with advanced device look-up and network reset capabilities.

A T-Mobile partnership brings digital innovation into focus while helping build highly-secure, safe, reliable fixed broadband.

T-Mobile is leading the way with a network built to support IoT today and into the future.
